Ingredients

Fish Meal, Wheat Flour, Soya Flour, Rice Flour, Spirulina, Kelp Flour, Tuna Oil, Dried Yeast, Wheatgerm, Vitamin A, Vitamin B Total, Vitamin E, Menadione, Niacin, Calcium B (Pantothenate), Folic Acid, Ascorbic Acid (especially developed for the Aquaculture Industry), Riboflavin (B2), Vitamin B12, Biotin, Pyridoxine B6, Chlorine Chloride, Cobalt, Iodine, Copper, Iron, Manganous Oxide, Zinc, Thiamin B1, NatuRose (3gms per kilo), Mycocurb (a preservative).

Breeders Blend Natural Colour Flake

is a high quality colour enhancing flake food incorporating NatuRose, nature's richest source of Astaxanthin. For fish to display brilliant colour as they do in the wild they must consume a diet high in carotenoids. Not only does NatuRose provide 1500ppm natural Astaxanthin it also provides a complimentary mix of carotenoids including lutein and beta carotene. NatuRose also provides your fish with fatty acids, amino acids and proteins not available in other colorants which are known to help keep your fish in top condition. Synthetic forms of Astaxanthin, which are used by many other fish food brands, do not provide your fish with the benefits of NatuRose.

Benefits: Totally natural colour. All the wonderful benefits of NatuRose. Full of vitamins and minerals. No toxic anti oxidants or preservatives. Natural Attractants. Spirulina

NatuRose[®] natural astaxanthin comes from nature's richest source of astaxanthin - pure cultured microalgae. Unlike synthetic or yeast sources of astaxanthin, NatuRose[®] microalgae meal delivers astaxanthin in a natural fatty acid complex. In addition to 1500ppm astaxanthin, a complimentary mix of carotenoids is supplied including lutein and beta carotene, as well as proteins, fatty acids and amino acids not available from other colorants. Natural coloration from NatuRose[®] is chemically indistinguishable from wild fish pigmentation.

Feeding Instructions: Feed 2-3 times daily with amounts your fish can consume within 3-4 minutes. Do not over feed. Unused flake is best stored under 27 C or ideally in the refrigerator. Breeders Blend flake food will not cloud water when fed correctly.
